PROVINCIAL REPORT ON THE WORKING OF THE INDIAN FACTORIES ACT IN THE BOMBAY PRESIDENCY FOR THE YEAR 1896.

I.—Factories and their Control.

The number of factories under control in the Presidency has risen from 292 at the end of 1895 to 318 at the end of 1896. The additions have been 6 in Bombay, 4 in Khándesh, 11 in Dhárwár, 3 at Ahmedabad, 3 in Hyderabad, and 1 each in Thar and Párkar, Surat and Ahmednagar; while 2 in Bombay and 1 each in Poona and Sholápur have been struck off the list. Seasonal factories have usually been retained on the list whether they worked or not, so long as they continued ready to reopen at any time, for an up-country gin sometimes stands idle for two or three years together and then reopens under new management.

2. After Bombay, the districts most concerned with the control of factories are Khándesh with 80, Hyderabad with 22, and Ahmedabad with 17 (all of which are spinning or weaving mills). It may not be out of place to mention that the word "factories", used as it here is in its purely legal sense, would give, to any one unacquainted with this side of India, a wholly mistaken impression of the distribution of steam-power in its chief application, which of course is to cotton. Owing to various conditions of growth and sale of the crop, the ginning season drags in Sind from November to May, while in South Gujarát it is generally speaking concentrated well within three months. The four cotton-growing districts of Gujarát contain some 168 ginning and pressing factories, not one of which is subject to the Act, although the Collector of Ahmedabad has just found the work of a few to have been spread intermittently over four months. In the Southern Marátha Country, eleven were brought under the Act last year, but it is supposed that others remain which are never open for the minimum period. In the Northern Deccan the season begins early, and in Khándesh, Násik and Ahmednagar, as in Sind, all or nearly all of the seasonal factories are under control. In 1895 the Collector of Khándesh raised the question whether several of the less employed ginning factories of his district were properly under the Act or not, and the outcome of the correspondence which arose was a revival of the proposal to expunge from the definition in Section 2 the minimum limit of four months. This proposal was submitted to the Government of India, who thereupon inquired whether the same difficulty is felt in other parts of the Presidency. This reference still awaits further report. It may be added here that to bring all ginning factories under control would entail some revision of existing arrangements for inspection, but would be in my opinion advisable were it not probable that the result would in Gujarát be their transfer into the territory of the nearest Native State.

3. Of the 318 factories, 170 are perennial, the remainder being seasonal. Of these latter, 145 with 103 of the former, or 248 in all, deal with cotton and employ 115,556 hands out of a total of 145,834. Of the remaining thirty thousand operatives, 1,623 are engaged in other textile industries (wool and silk), 3,383 in printing-presses, 498 in flour mills, and 21,508 in workshops dealing chiefly with metals, in which term are here classed the Dockyards and all the Government works except the Gunpowder Factory at Kirkee. Of the total number of operatives 96,561 are employed within the Island of Bombay. The inclusion of the two mills at Kurla, which practically belong to Bombay, would bring this figure just over the lákh.

4. Throughout the mofussil, the administration of the Act remained in the hands of District Magistrates as Chief Inspectors aided by Assistant and Deputy Collectors and Civil Surgeons and by Mr. Shore as Presidency Inspector. In Bombay Mr. Enthoven continued Chief Inspector for practically the whole year, assisted by the Presidency Surgeons and until April by two, and after that by one, special Inspector. This staff was found sufficient for Bombay, and Mr. Shore was left entirely free for up-country duty.

5. In Bombay only 16 factories escaped one of the four quarterly inspections, and no medical inspection was omitted. Of the 190 factories outside Bombay, 88 were inspected four or more times, 39 thrice, 39 twice and 17 once; and 7 escaped ordinary inspection altogether. Of the last-mentioned, 6 were

closed throughout the year, and 1 worked for so short a time that no inspection could be managed. Of the other 95 factories inspected less than four times, 90 were gins and presses which only worked for a few months. Similar explanations cover also most of the apparent deficiencies in medical inspection (77 cases of only one, and 17 of no, inspection); but of perennial factories borne on the list from the beginning of the year, two in Khándesh and nine in Poona received only one medical visit apiece. The Presidency Inspector made 183 inspections in 13 districts, besides 8 in the Central Provinces, but did not manage a tour in Sind.

II.—Sanitation.

6. The sanitary condition of the factories is for the most part reported fair or satisfactory, and in Belgaum excellent. The rules are generally observed except as regards latrines in Khándesh ginning factories and ventilation in spinning mills; and warnings against their breach, as well as suggestions on minor points, obtained in most cases ready compliance. The Collector of Hyderabad, however, excepts five ginning factories by name from his general commendation; latrines in Ahmedabad, though sufficient in number, were not properly looked after; and necessary improvement in the cleanliness of the Nadiád Mill's premises was only effected, after repeated warnings, by prosecution. Most of the village ginning factories in Khándesh remain unprovided with latrines, and where they exist they are not used. The Collector "thinks the average factory is far better without latrines," but has called on his Divisional Inspectors to report all those where the lack of them becomes a nuisance. From Násik the same conditions are reported and a like opinion expressed. In similar factories in Nagar latrines have been provided, but are not used.

7. In regard to the ventilation of cotton mills, it is disappointing to find that the lengthy considerations and discussions described in the Bombay Chief Inspector's report for 1895 have as yet at least come to nothing. Some public spirit was shown in undertaking experiments, but remarkable procrastination in carrying them out, and of the one which is complete no fair opportunity for scientific test had been obtained up to the date of the Bombay report. This experiment does not include a vertical outlet for the foul air, which is regarded by medical opinion as an essential part of any satisfactory scheme, and even as far as it goes it is pronounced a failure by the manager and spinners of the mill where it has been tried. The expert Inspector inclines throughout the controversy to the spinners' side, and at all events it will not do to insist on ventilation at the expense of production without very careful consideration. It will soon however be time to pass final judgment on these experiments, but it may be noted that the present Chief Inspector is considerably less sanguine of their success than was Mr. Enthoven. Attention was also paid in Bombay to the removal of the dust and fluff which fill the air in cotton-presses, but no definite conclusion on the subject has been reached.

III.—General Health of the Operatives.

8. Under this head there is nothing unsatisfactory to report except that the high percentage of absentees, averaging 17, in the four factories of Surat, is attributed partly to the prevalence of both small-pox and cholera in the earlier months of the year, though mainly as usual to the Surat workman's notorious love of holiday-making. In the Ahmedabad mills the percentage is put between 8 and 10, and in those of Broach as low as 4 or 5 (although the mill-population is characterized as "migratory"). In Railway and other workshops the percentages are returned as 6 at Igatpuri, 15 at Hubli, and 13 and 10 at Karáchi. The Swadeshi Mill at Kurla returns a percentage of 5·83, and the Kurla Mill of 12. The difference is attributed to the stoppage of some of the Kurla mill's looms. No mill has every one of its looms at work year in year out, yet stoppage of looms is not mentioned as affecting absentee-percentages in any other mill than the Kurla, and it is not known whether it has been taken account of or not. This explanation well illustrates the uselessness of these statistics. No inference can be drawn from them unless factory-owners can be made to keep a daily record of absentees, carefully classified according to cause of absence, and calculated by elaborate rules for fixing the standard strength for each day. Returns under such a procedure would be highly troublesome to both managers

Digitized with financial assistance from the Government of Maharashtra on 11 July, 2017

and inspectors, and they would never be really trustworthy. Mistakes would constantly be made in applying the rules, and absences would be attributed, with the monotonous uniformity of a village death register, to fever.

The statistics as to the average age of operatives are likewise unreliable, and the returns on this subject might, I think, be discontinued.

IV.—Wages and General Condition.

9. The average wages of gin-labour throughout the Presidency proper may be put at 4 annas a day for a man, 3 for a woman, and 2 for a child; in the Northern Deccan a little more and in the Southern Marátha Country a little less. In Sind, where labour of all kinds is comparatively dear, a man is reported to earn by this work rather more than 5 annas a day and a woman hardly less. These gin-hands are mostly desert-folk, who, according to Khán Bahádur Mahamed Yákub, command lower wages by heavy out-door labour than the better-nourished Sindhi. One would suppose that they would return to their herds at the close of each season; but the Collector of Hyderabad seems to imply that they have settled in the Indus Valley and maintain themselves in the off-season by local labour of various kinds. Except in Sind, gin-hands are not a distinct class from the local agricultural population.

10. In the mills, and in the miscellaneous factories of Poona and Karáchi, most of the workpeople depend on the factories alone, seldom reverting to agriculture. Family earnings and cost of living are estimated by such various methods that they cannot be compared; but factory labour is everywhere attractive and the condition of the class is generally reported a little better than that of the cultivator. The Collector of Ahmedabad writes :—

"Those families whose members are to a large extent employed in the mills are frequently better off and less involved in debt than those dependent on other sources for their means of livelihood."

11. Little or nothing is reported of the system of payment in force in various districts. In Ahmedabad, wages are known to be paid fortnightly with a week in hand (*i.e.*, in arrear). In Bombay up to the close of the year they were still paid monthly with a month in hand. The subject of the payment of wages of mill hands is already before Government and need not here be again discussed.

V.—Employment of Women and Children.

12. Out of 145,884 operatives, 29,703 were women. Of these, 19,695 were employed in Bombay, and most of the remainder in ginning-factories, which except in Sind are worked chiefly by women. It is noticeable that the percentage of women among mill-hands is less than 11 in Ahmedabad, but as much as 25 in Bombay. This is no doubt due to the fact that all but 4 of the Ahmedabad mills weave as well as spin, while in Bombay 39 out of 68 produce only yarn; for there is more room for women's labour in preparing yarn for sale than for the loom.

13. No irregularity has been brought to notice except that in the Kurla Mill the women's hours are returned as $11\frac{1}{2}$ (which must, it is thought, include by an oversight the midday stoppage), and that the ginning-factory in Thar and Párkar, when first brought under the Act during the year under report, was found to be working its female hands $11\frac{1}{2}$ hours. A warning, which was complied with, was judged to meet the case. The reports from Thar and Párkar and Hyderabad, however, as well as the Chief Inspector of Bombay, refer to the difficulty of enforcing the law as regards those women and children who are employed by outside contactors to handpick cotton on the premises of presses, and it seems also of ginning-factories and who are paid by piece-work. The numbers also of such labourers are not returned.

14. The number of children is returned as 6,741, of whom 4,939 were boys and 1,802 girls. The number is below 1895, but above all previous years, although the number employed in Bombay steadily diminishes. Here again no serious irregularity was detected.

VI.—Fencing of Machinery.

15. Machinery is generally reported to be adequately guarded, and such orders as are necessary readily complied with. The Collector of Hyderabad, however, writes :—

"With the exception of a few isolated cases none of the factories have their engines and other machinery fenced. The factory owners in whose factories this omission was detected were ordered to fence them."

16. Ring-frames are now understood to be completely guarded in the mofussil as well as in Bombay. Mr. Enthoven is to be congratulated on the success of his efforts to minimize the danger of these machines.

VII.—Accidents.

17. The following table shows the number of accidents reported during each of the last five years :—

Year.	Fatal accidents.	Serious accidents.	Slight accidents.	Total.	Average per 100 men employed.
1892	13	79	639	731	·62
1893	13	75	844	932	·74
1894	17	66	962	1,045	·78
1895	17	81	992	1,090	·78
1896	10	95	1,092	1,197	·82

The Bombay Chief Inspector remarks that the rise in the percentage of accidents may be attributed to greater regularity in reporting them. While the Bombay factories, and perhaps a few of those up-country, err on the right side in returning every accident, however trivial, the majority of mofussil factories do not seem alive to their duty in this matter. For instance, from the Manor Mill at Nadiád only 1 accident (or less than $\frac{1}{4}$ per cent. of the hands) is reported; from the three mills at Surat only 5; from Bijápur none; from Dhárwár 32 at the railway workshops, only 3 at the mill and only 1 amongst the ginning factories; from Hyderabad only 3, and all of these at Messrs. Ralli Brothers; from Karáchi only 5, and all of these at the Railway workshops.

18. The one fatality reported from Ahmedabad resulted from burns sustained in a blow-room fire. Fatal injuries were also received in another mill by a workman who fell from the roof. Contrary to the letter of Section 13 this fatality has not been included among the accidents, because the man was not a mill-hand nor engaged at the time on any process of the industry, but only on repairs to the buildings. Both these accidents were returned merely as "serious", and only belated inquiries made at the time of preparing the half-yearly return showed that the men had died of their injuries. The only other mofussil fatality, which occurred in the Gokák Water-power Mill, is not described. The circumstances of the eight fatal accidents which took place in Bombay are detailed in the Chief Inspector's report.

19. Mr. Shore's suggestion, that Inspectors should watch inquests on fatal accidents, is a good one, and could be carried out in Bombay. Up-country, a summons should only be served on the Presidency Inspector when the inquiring officer felt special need of expert evidence or advice. In ordinary cases it would suffice to give him an intimation of the inquest, and when he next visited the locality access to the record to assist him in any separate inquiry he might think fit to make at the factory concerned.

VIII.—Prosecutions.

20. There were no prosecutions during the year except, first, in Hyderabad, where three were instituted "in consequence of registers, &c., not having been properly kept" and all resulted in conviction and fine, and secondly in

Káira, where the complaint under Section 15 (*g*) (mentioned in para. 6) secured in the first instance conviction and a fine of Rs. 101, which however was remitted on appeal on a technical ground. A second appeal to the High Court on behalf of Government is reported as pending.

IX.—General.

21. The Presidency Inspector Mr. Shore appears to take an interest in his work; as have also Messrs. Engel and McCormack in Bombay. Mr. Enthoven, I. C. S., who has been Chief Factory Inspector throughout almost the whole year, has shown zeal and ability: his services have been already referred to in previous reports. He has been succeeded during the current year by Mr. Wood, I. C. S., who has written a careful and thoughtful report.

The medical officers have shown zeal and interest in their work, though towards the end of the year they have naturally been heavily weighted with plague work. The factory work falls most heavily on Surgeon-Lieutenant-Colonel Waters. The Millowners' Association as usual has given assistance.

R. M. KENNEDY,
Collector of Land Revenue,
Customs and Opium.

Bombay Collector's Office,
Factory Department,
19th July 1897.

R. M. KENNEDY,
Collector of Land Revenue, Customs and Opium.

No. $\frac{F.I.}{174}$ OF 1897.

From

A. L. M. WOOD, ESQUIRE,
Chief Inspector of Factories;

To

J. McNEILL, ESQUIRE,
Acting Collector of Land Revenue,
Customs and Opium,
Bombay.

Bombay Custom House,
Factory Department,
19th May 1897.

SIR,

I have the honour to submit the Annual Report for the year 1896 on the working of the Indian Factories Act in the Town and Island of Bombay.

2. The following new factories have been added to the inspection list during the year :—In the first quarter, the Hon'ble Mr. Wadia's new Textile (Spinning) Mill at Parel, and the Western India Saw-mill at Mazagon; in the second quarter, the new Chhoi Silk Mill at Parel, and the Husenali Hosiery Factory at Chinchpoogly; and in the last quarter, Messrs. C. Jost & Co.'s workshop at Carnac Bandar and the newly-extended Karim Litho-[graphic] Press at Byculla, a semi-religious institution engaged chiefly in reproducing the Koran. During the second quarter the Legeyt Cotton Press was struck off the list; and the Victoria Roller Flour Mill shewing no signs of reopening was also omitted. The net result is 128 factories liable to inspection at the end of the year against 124 at the beginning. The owners of the Legeyt Cotton Press obtained exemption on the ground that they never employed as many as 50 hands, but as shewn in paragraph 9 below, there is reason to doubt whether this plea can be accepted from any pressing-factory, and the case is now under fresh inquiry.

3. These 128 factories may be classed as follows :—

Presses (for cotton, wool and hemp)	8
Cotton-ginning and cleaning	1
Cotton-cleaning and spinning	39
Cotton-cleaning, spinning and weaving (some of these include hosiery)	29
Cotton hosiery	2
Woollen-mills	2
Silk-mills	2
Dye-works	2
Oil-mills	2
Flour-mills	5
Printing presses	9
Dockyards, Foundries, Government, Railway and other workshops ...	21
Saw-mills	2
Miscellaneous: the Gasworks, the Sirdar's Carbonic Acid Inventions Syndicate, the Western India (Tannery and) Army Boot Factory, and Messrs. Wimbridge's Furniture Workshops	4
	128

The extension of the cotton industry has already far exceeded the prediction made in last year's report. There are now, in the teeth of the plague, no less than eight mills under active construction, and at least two more are undergoing substantial extensions. Most of these buildings were begun during the year under report, though few, if any, will be ready for work before the close of the current year.

4. Interrupted only by privilege leave from 22nd September to 15th October, during which time Mr. Jackson discharged his office duties, Mr. Enthoven

continued Chief Inspector until his transfer to Ahmednagar on the 9th of December; the office being held for the remaining days of the year by Mr. Jackson and (from Christmas Eve) by Mr. McNeill.

5. Messrs. Engel and Carpenter continued to assist the Chief Inspector in Bombay until the 21st of April, when the change in the cotton duties led to the appointment of Mr. McCormack as second Inspector of Factories and Excise in place of Mr. Carpenter, and to Mr. Engel's despatch on Excise duty to Gujarát. On the 1st November 1896, Mr. Engel returned to his combined Factory and Excise duties in Bombay, Mr. McCormack taking his place at Ahmedabad. Thus there were two Technical Inspectors in the Town and Island for rather over a quarter of the year, and one for the remainder.

6. As Presidency Surgeon of the 3rd District, Surgeon-Lieutenant-Colonel Waters remained throughout the year Joint Inspector for the majority of the factories (those of Byculla, Parel, Mázgaon, &c.), while those of the 1st District (Tárdeo, &c.) were visited by Surgeon-Major Dimmock, and those of the 2nd District (Colába and the Fort) by Surgeon-Major J. P. Barry and Surgeon-Lieutenant-Colonel Barker.

7. The following table shews the number of inspections performed during the year (exclusive, of course, of visits paid under the Cotton Duties Act):—

Quarter.	Number of Factories liable to inspection.	Visits by the Chief Inspector.	Visits by the Subordinate Inspectors.	Visits by Medical Officers.	Total.
1st	125	29	96	50	175
2nd	127	46	90	76	212
3rd	126	19	107	67	193
4th	128	25	92	60	177
	Average number per quarter 126.	Totals.			
		119	385	253	757

The total number of visits gives an average of six per factory. Mr. Enthoven seems to have contemplated taking on himself a larger number of inspections than he was able to carry out in 1895, but his out-door work was again hampered, at first by the change in the cotton duties, and towards the close of the year by ill-health. It will be seen, however, that the one technical Inspector was able to keep up the average maintained until April by the two. Not a single medical inspection was omitted.

8. The number of persons employed in the 128 factories averaged 96,561 against 94,048 in the slightly smaller number of factories under the Act in 1895. The cotton industry (including pressing) is returned as employing 75,424 of the total.

9. It may be remarked that these figures do not provide an accurate estimate of the factory population, for not only do they exclude the employés of factories which are not under the Act, but they exclude also large numbers of hands employed by the job in the presses. Attached to a pressing factory are large godowns, in which merchants rent space for the storing of their goods, which they then pass through the press at their own convenience as they receive orders. Preliminary to pressing, cotton-waste, wool and hemp have to be sorted, and cotton has to be hand-broken, mixed and passed through the opener. These operations are conducted not by the press-owner, but by the merchant, and by means of gangs of coolies of both sexes recruited for each job through a labour contractor. The packing of the cotton, &c., into the press-box is done by gangs of khalásis recruited in a similar manner, but paid by the press-owner. These packers are paid by the bale, and work in gangs of a fixed number to each press, so that the press-owner is able to tell how many he has employed during the half-year. Their average, added to the small regular staff maintained to work the engines and presses, gives the low figures set down in the return.

Even these low averages must usually represent a muster of more than 50 hands on days when the factory is full of work, but hands who (as above described) work in the press for the merchant and not for the press-owner, are altogether ignored. Of the numbers of these latter no accurate return seems possible, but they have been ruled to be "persons employed in the factory" within the meaning of the Act. This ruling would seem to place beyond doubt the propriety of bringing the smallest pressing-factory under the Act. This is desirable for the sake of ventilation and other objects of the law, though to regulate holidays and the employment of women and children among casual gangs of coolies is next to impossible.

II.—Ventilation and Sanitary Condition.

10. An exhaustive account was furnished in last year's report of the proposals made and experiments undertaken in the ventilation of the spinning-rooms of cotton-mills. I regret to be unable to report the substantial progress which my predecessor expected. It may be mentioned in the first place that in the report for 1895 the history of these experiments was not confined to that year but was brought up to date. It was not until February that Mr. Enthoven and Surgeon-Lieutenant-Colonel Waters were able to inspect the partial experiment made at the Bombay Cotton Mill. It was partial in that it was carried out along one side only of the room, and that without the gearing which was to place it under the sole control of the manager. This gearing was afterwards fitted, but on the 30th June the fixing of a similar arrangement on the other (the weather) side of the room was postponed until after the rains. After the rains came the plague, and the experiment remains to this day incomplete. In fact, the only step taken is in the wrong direction. The wheel in the manager's office was found in some way to be inconvenient, and has been replaced by a lever elsewhere, which is not under the manager's sole control.

11. The work at the Khatau Makanji Mill was conducted in a still more dilatory manner. It was not until shortly before last year's report was written that one or two of the windows had been fitted with the glass venetians and it was only on the 30th June that the work of fitting venetians in the other windows was reported to have been placed in the hands of contractors. On the 1st September "a few more windows" were offered for inspection, but on the 14th idem the Secretary wrote that the draught had been found too strong and that it was necessary to hang gunny-bags across the venetians. The further discussion of the subject in the light of this letter was interrupted by Mr. Enthoven's enforced absence on leave, and when he returned the plague had set in. Mr. Gordhandas Khatau, without whose personal co-operation Mr. Enthoven does not seem to have thought further steps advisable, removed from Bombay; and with the end of the year began that depletion of the mills which has since rendered useless any attempt to gauge the value of systems of ventilation designed to meet normal conditions. All the windows are now fitted with venetians, and also with gunnies, and await a test with a full room and a windy day.

12. Possessing but three months' experience of the Bombay mills—and that gained under abnormal conditions—I will attempt no original contribution to the discussion of this question, but content myself with repeating my predecessor's remark that neither of the two experiments includes the provision of any separate outlet for the foul air, which Surgeon-Lieutenant-Colonel Waters regarded as an essential part of any satisfactory scheme of ventilation. It may be added that when it is thought necessary, without any such provision, to screen venetians, whose draught on a still day is scarcely perceptible to a hand placed against them, the prospect of our being able to introduce voluntary exhaust-outlets looks somewhat remote.

13. The ventilation of cotton-presses began to receive serious attention during the year under report. This is quite a distinct question from the ventilation of the spinning-rooms of mills. What is wanted in a spinning-room is simply to keep a much-breathed atmosphere sweet without admitting draught. In a press, on the contrary, there is no objection to draught, and usually all the windows are kept wide open. Some presses have roof-openings besides. The air is sweet enough, but it is solid with cotton-dust which no natural ventilation will

remove. The press-owners were asked by Mr. Enthoven to consider the adoption of artificial ventilation, and a contrivance was designed by Mr. McCormack for the purpose. This consisted in a set of horizontal ducts of sheet-iron, each provided with several inlets and leading to a fan in the wall. The Bombay Association of Fire Insurance Agents objected to the design, and it was not until after the close of the year that their approval was obtained to a modified form of it. The approval, moreover, is a guarded one, and it is possible that Insurance Companies may, as the press-owners have objected, demand a higher premium on a press-building ventilated in the manner contemplated. Pending decision of the question of danger from fire, the press-owners' other objections were left unanswered, and need not be discussed in this report. They do not seem to me to call for elaborate answers.

14. The general sanitary condition of the factories continued unaltered, except that the Tramway Workshops, the "Times of India" Press, and possibly a few others, changed their old-fashioned latrines for water-closets. This is an immense improvement, and it is intended to insist upon it in premises where open air space is limited. Given this, combined with ordinary ventilation and a management which insists on ordinary cleanliness, nothing would seem to be left in the Fort printing presses to which a Government Inspector can legitimately object.

15. Towards the end of the year the growth of the plague directed the special attention of all Inspectors to sanitary matters, and at the instance of Surgeon-Lieutenant-Colonel Waters, a circular was issued by the Collector urging all mill-owners to have their premises freshly limewashed. This has in most cases been carried out.

16. The use of humidifiers in place of steam, favourably noticed as an experiment in the last report, is on the increase.

III.—General Condition of the Operatives.

17. Under this heading there is again nothing to record. When the mill-owners are enjoying their first taste of serious labour troubles, when a reeling woman is paid something like a rupee a day, by time and not by piece, and draws the money every evening, it is somewhat surprising to learn that at the close of 1896 the mills were still practically in a normal condition. Some of their customers and some of their officers and clerks had fled from the plague, but the panic had scarcely touched the rank and file. November's wages were paid with the usual severity about Christmas, and if a few hands were not there to draw them their earnings were forfeit. By the end of February many mills were closed and the rest were knocking their engines to pieces running 20 or 30 per cent. of their machines. The machines were tended by a chance collection of loafers and boys who drew a rupee a piece at the end of the day for being there at all. But this is foreign to the annual report for 1896.

IV.—Employment of Women and Children.

18. The number of women employed in the factories is returned as 19,695, of whom 19,090 belong to the cotton industry, including presses.

19. The average number of children employed during the year is returned as 2,714, of whom 2,069 were boys and 645 girls. The drop from 3,405 in 1895 to 2,714 in 1896 is very noticeable. Unless the law has been seriously evaded, or unless there has been a radical change in the certifying Surgeons' standards of age, Mr. Enthoven's conclusion that "child-labour is steadily losing in popularity among employers" (para. 21 of report for 1895) would now seem to be irresistible.

20. It has not been found practicable to introduce generally the new form of children's certificate. The attempt to do so evoked an unanswerable protest from the Presidency Surgeon of the 3rd District. Besides repeating the objection already urged by the Collector that he could never utilize this elaborate form until his time were economized by the help of a clerk, Surgeon-Lieutenant-Colonel Waters argued that the form would bring trouble and confusion into managers' offices, besides being "likely to lead to infinite misrepresentation by the juvenile operatives concerned." He expressed his satisfac-

tion with the existing system, and pointed out the misfortune to the children themselves involved in the probable result of the mills discontinuing their employment. This protest was followed by another in the same strain from the Mill-owners' Association, which would, however, have been more useful if made at the proper time, before instead of after the rule became law. Finally the Presidency Surgeon, 1st District, who deals with far fewer factories than his colleague of the 3rd District, reported himself unequal to the new form without clerical help. In the face of these difficulties, it was found impossible to insist on the use of the new form except in cases where a certificate might be demanded.

V.—Fencing of Machinery.

21. This department of the year's work consisted chiefly in completing and generalizing the valuable reforms described in last year's report. A glance at the plate thereto attached will show that the end of a ring-frame was but little less accessible underneath than was the side; and another death occurring in the tin-rollers of a frame already guarded at the side seemed to show a perverse determination on the part of the boys to creep under the machine by whatever access was left open to them. Orders were accordingly issued and carried out for the guards to be continued across the ends of the frames. The tin-rollers still get hold of a lad's fingers now and then, but they are powerless to kill or cripple him, and managers have already testified to accidents which have imposed but a few days' out-door treatment at the hospital, but which without "Mr. Enthoven's guards" would have robbed a boy of his livelihood or his life.

22. During the year all feed-rollers of Crichton openers have been roofed over, so to speak, with a fixed board wide enough to prevent a man's arm being thrust in beyond the elbow, as was contemplated last year. Progress has also been made in the fencing of the headstocks of mules, and it is believed that few (if any) remain a serious danger. This is a point to which a general and rigid order is inapplicable, for to attach guards indiscriminately to all mules would be a waste of trouble. It is only when the space behind a particular mule has frequent occasion to be used as a passage, and where an Inspector judges the passage to be too narrow for safety, that the management need be called upon to fence the headstock.

23. Two ghastly accidents occurring on sizing machines led to a correspondence in which the Mill-owners' Association finally undertook to "ask the agents and owners of weaving-mills to give effect to the Chief Inspector's suggestion," which was either to guard or to level with the side of the machine the set-screws of the revolving beam. The suggestion was of the nature of a *pis aller*, and was not embodied in a formal order.

VI.—Accidents.

24. The subjoined table exhibits the number of accidents reported yearly from 1892 to 1896 inclusive;—

Year.	Fatal.	Serious.	Minor.	Total.	Number of operatives employed.	Number of accidents per 100.
1892	5	72	525	602	84,661	·71
1893	5	33	639	677	87,984	·77
1894	11	24	712	747	90,721	·82
1895	11	32	765	808	94,048	·86
1896	8	42	832	882	96,561	·91

Figures obtained in this manner are obviously untrustworthy, and the table is given chiefly with the view of illustrating how use and steadily increasing strictness of control are gradually strengthening among the officers of factories a spirit of loyalty to this, and presumably therefore to other provisions of the Act. That the true percentage of accidents has risen *pari passu* with the efficiency of the department is not to be believed. The rising percentage

of the table is matter for congratulation as one of the results of that efficiency, for it is the percentage of reports, not of accidents. This view is strikingly confirmed by taking separately the figures for each quarter of last year. They are as follows: 224, 242, 241 and 175. The rise from the first to the second quarter is of a piece with the rise of the previous four years: the fall from the third to the fourth must be attributed almost entirely to laxity of management, for, as I have mentioned above, agents, managers and clerks began to desert their posts before the hands and before the close of the year. In the classification of the accidents, again, the practice has become more uniform. The 72 "serious" accidents of 1892 cannot all have been equally serious with the 33 of 1893; and the high rate of fatalities regretted by the Chief Inspector in 1894 and 1895 must be largely due to managers now reporting deaths unconnected with machinery, which they would not have troubled to treat as accidents before, and making second reports of deaths from injuries which have already been reported as serious accidents. Better care, in short, is taken to keep on the right side of the law.

25. The eight fatalities of 1896 occurred as follows: One man was crushed to death by the fall of a bale off a cart; one more boy (as mentioned in paragraph 21) was drawn under a ring-frame; two men were caught by the belts of carding-engines; one died apparently of lockjaw or mortification, his only injury being the compound fracture of two finger-ends under a steam-hammer; another was killed by a fall of masonry dislodged from a chimney-top by lightning; a workman executing some repairs to a roof on a scaffold allowed his dhoti to lap round the shafting and dash him against a beam, and lastly a piece of a set-hammer caused a smith's death by flying off the anvil into his stomach. All but three of these eight casualties illustrate the closing remarks of the last paragraph; indeed the seventh in order was only reported as a serious accident, and its fatal issue the very same night would never have been recorded, but for the Chief Inspector despatching Mr. McCormack to inquire into the circumstances.

26. The last mentioned fatal accident, together with those referred to in paragraph 23, and one or two others, require separate notice. They were all due to the wearing of loose dhotis, and were made the ground of an appeal to the Mill-owners' Association to urge upon managers the precaution of insisting on men going about certain kinds of work with their loins tightly girt. The Association failed to see any necessity for moving in this direction, and Mr. Enthoven fell back on the suggestion noticed in paragraph 23. This remedy, however, dealing with sizing machines alone, removes but one of the various risks to which the wearer of a loose dhoti is specially exposed.

VII.—Prosecutions.

27. No prosecutions were instituted during the year under report.

---

28. Messrs. Engel and Carpenter continued to discharge their duties efficiently, and Mr. McCormack entered upon the service of Government with zeal. Mr. Engel's services have been especially valuable since Mr. Enthoven's departure, and I am indebted to him for useful assistance in the compilation of this report.

I have the honour to be,
Sir,
Your most obedient Servant,
A. WOOD,
Chief Inspector of Factories.

STATEMENT TO ACCOMPANY ANNUAL DISTRICT REPORT ON THE WORKING OF THE INDIAN FACTORIES ACT.
